COURSE ADMINISTRATION

Welcome & Housekeeping

© 2026 Tertiary Infotech Academy Pte Ltd

TRAINERS LISTED FOR C027

Course Trainer Profiles

1

Kesston Tang

Consultant and trainer with experience in business analysis, negotiation, corporate advisory and stakeholder communication.

2

Angel Koh

Technology practitioner and trainer with extensive experience designing information systems and applying emerging digital tools.

© 2026 Tertiary Infotech Academy Pte Ltd

ICE-BREAKER

Let's Know Each Other

1. Your name, organisation and role.
2. One Microsoft 365 task that repeatedly consumes time.
3. One output you would never share without checking it first.
4. Which Copilot entry points you can see in Chat, Word, PowerPoint, Excel, Outlook and Teams.

© 2026 Tertiary Infotech Academy Pte Ltd

HOUSEKEEPING

Ground Rules

1. Set your mobile phone to silent mode.
2. Participate actively — no question is too small.
3. Mutual respect: agree to disagree.
4. One conversation at a time.
5. Be punctual; return from breaks on time.
6. Learn by doing — try every hands-on lab.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE MATERIALS

Access Course Materials

1. Open the C027 course page or the trainer-supplied Drive folder
2. Open the courseware links for this course
3. Download the Slides, Learner Guide and Lesson Plan
4. Open the Activities folder for all eight labs
5. Keep the files together as you work

Course page: tertiarycourses.com.sg/microsoft-365-copilot-masterclass.html

© 2026 Tertiary Infotech Academy Pte Ltd

SCHEDULE

Lesson Plan — 1 Day, 7.5 instructional hours

Course sequence

- Day 1 — Ground, create, analyse, coordinate and govern one connected Microsoft 365 Copilot workflow
  - Topic 1: Getting Started with Microsoft 365 Copilot (Labs 1–3)
  - Topic 2: Copilot Across Your Everyday Work Apps (Labs 4–8)

Day format

- Daily timing
  - 9:30 am - 6:30 pm (1-hour lunch; two 15-minute tea breaks; 7.5 instructional hours)
- Instructional time
  - 7.5 hours · 8 connected labs
- Learning arc
  - Concept → demonstrate → build → verify → discuss → recap

© 2026 Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL ACHIEVE

Learning Outcomes

1

Ground & Prompt

Explain how Microsoft 365 Copilot grounds responses, apply a structured prompt method and verify a source-backed research summary in Copilot Chat.

2

Write & Present

Draft, rewrite and validate a business document in Word, then generate and refine a presentation in PowerPoint from the approved document.

3

Analyse & Communicate

Analyse a bounded dataset and generate formulas in Excel, then summarise a synthetic email thread and prepare a reviewed response in Outlook.

4

Coordinate & Govern

Produce a Teams meeting recap and action register, connect outputs across Microsoft 365 apps, and apply responsible-use, privacy and human-review controls.

© 2026 Tertiary Infotech Academy Pte Ltd

LEARNING APPROACH

How You'll Learn

1. Trainer demonstrates the concept
2. You build it yourself in the hands-on lab
3. Verify with the lab's 'Test it' step
4. Discuss and troubleshoot together
5. Recap against the learning outcomes

© 2026 Tertiary Infotech Academy Pte Ltd

CORE CONCEPTS

The Traceable Copilot Work System

© 2026 Tertiary Infotech Academy Pte Ltd

OVERVIEW

Keep Four Layers Visible

1

Source

The approved file, table, thread, transcript or web page that governs the facts.

2

Prompt

Goal, Context, Source and Expectations, including exclusions and review criteria.

3

Proposal

The generated summary, draft, formula, slide, action or change that still needs review.

4

Release

The named reviewer, verification evidence, decision and approved destination.

© 2026 Tertiary Infotech Academy Pte Ltd

THE BUILDING BLOCKS

G-C-S-E Prompt Framework

1

Goal

What to create, decide, explain, compare or change.

2

Context

Audience, situation, terminology, time period and intended use.

3

Source

Named evidence, permitted scope and explicit exclusions.

4

Expectations

Format, tone, constraints, citations, uncertainty and checks.

© 2026 Tertiary Infotech Academy Pte Ltd

C027 OPERATING PRINCIPLE

Copilot accelerates the proposal; the evidence and reviewer determine whether it is ready.

Ground every task, inspect every handoff and keep consequential release decisions with a named person.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE ROADMAP

What You Will Build

Evidence layer

- source register
- claim ledger
- verified Excel controls

Communication layer

- approved Word brief
- refined PowerPoint deck
- reviewed Outlook draft

Coordination layer

- Teams action register
- cross-app manifest
- responsible-use review log

© 2026 Tertiary Infotech Academy Pte Ltd

The Learning Arc in Every Lab

1. Open the supplied checkpoint and state the intended outcome.
2. Prompt Copilot with G-C-S-E and a bounded source.
3. Inspect the generated proposal in the current app.
4. Complete Test It, record the release state and save the checkpoint.

© 2026 Tertiary Infotech Academy Pte Ltd

BEFORE AN OUTPUT LEAVES DRAFT

The C027 Release Gate

1

Source

Are all material facts grounded in approved, current and accessible evidence?

2

Accuracy

Do dates, numbers, owners, formulas and commitments match the governing sources?

3

Sensitivity

Are permissions, labels, recipients and minimum-necessary data appropriate?

4

Quality

Does the output fit the audience, format, tone and accessibility needs?

5

Consistency

Do downstream files agree with the approved source register and each other?

6

Accountability

Is a named reviewer choosing Approved, Revise or Hold with limitations visible?

© 2026 Tertiary Infotech Academy Pte Ltd

01

TOPIC 01

Getting Started with Microsoft 365 Copilot

How Copilot works · effective prompts · Copilot Chat research · Word drafting and rewriting · PowerPoint generation and refinement

© 2026 Tertiary Infotech Academy Pte Ltd

Key Concepts — Getting Started with Microsoft 365 Copilot

1

Orchestration and grounding

Copilot combines the instruction, permitted work context and app capability before a model proposes a response.

2

G-C-S-E prompts

State Goal, Context, Source and Expectations so the task, evidence boundary and output contract are visible.

3

Source-backed research

Treat generated summaries as claims to trace, compare and approve rather than as automatic truth.

4

Word review loop

Draft, inspect, rewrite a bounded selection, compare against the brief and approve the document.

5

Document-to-deck handoff

Use an approved Word file as the PowerPoint source, then check structure, facts, visuals and speaker notes.

6

Availability awareness

Licensing, organisational policy, platform and update channel can change which Copilot controls are visible.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · CONCEPT

Introduction to Microsoft 365 Copilot and How It Works

WHAT

- Microsoft 365 Copilot is an AI-powered work assistant integrated with Microsoft 365 apps. For a signed-in user it can combine the prompt, permitted organisational context from Microsoft Graph, optional web grounding and the capabilities of the current app. The large language model proposes an output; Microsoft 365 then returns it to the user for review.

WHY IT MATTERS

- A useful response depends on both the instruction and the information available to ground it. Copilot does not receive unlimited visibility into a tenant: it works within the signed-in user's permissions. Weak source access can produce an incomplete answer, while excessive sharing can expose information that the user was already allowed to find.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

How It Works — Introduction to Microsoft 365 Copilot and How It Works

1

The user states a task in Copilot Chat or inside a Microsoft 365 app.

2

Copilot interprets the instruction and retrieves permitted context from named files, current app content, work data or the web when enabled.

3

The model generates a proposal; the app presents the response, citations, draft or editable change for human inspection.

4

The user checks source coverage, accuracy, tone, permissions and downstream consequences before keeping or sharing it.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Introduction to Microsoft 365 Copilot and How It Works

WORKED EXAMPLE

- An operations coordinator asks for a launch summary using an approved brief and a decision log.
- Copilot grounds the response only in files the coordinator can access and returns a draft with source references.
- The coordinator notices one missing decision, adds the correct source and regenerates before approving the summary.

DECISION GUIDE

- **Use when**
  - The task and evidence boundary are clear, the user has legitimate access and a person can review the output.
  - A draft, summary, comparison or first-pass structure will accelerate work without removing accountability.
- **Avoid when**
  - The task would disclose information to an unintended audience or relies on content the user should not access.
  - An unchecked output would trigger a high-impact financial, legal, safety, employment or customer decision.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Introduction to Microsoft 365 Copilot and How It Works

Permission

- Confirm the signed-in identity and whether every referenced source is appropriate for the task.

Grounding

- Name the source and distinguish retrieved evidence from generated connective language.

Review

- Check the response against the original files before accepting, editing or sharing it.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · CONCEPT

Writing Effective Prompts for Better Results

WHAT

- A prompt is the instruction and context supplied to Copilot. The C027 method uses four elements: Goal states the outcome; Context explains the audience and situation; Source sets the evidence boundary; Expectations define format, tone, constraints and review criteria. A clear goal is essential, while the other elements reduce ambiguity and improve control.

WHY IT MATTERS

- Vague prompts shift important choices to the model. A visible prompt contract makes it easier to compare the result with what was requested, identify missing evidence and refine only the weak element. Effective prompting is iterative: ask, inspect, point to the gap and follow up.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

How It Works — Writing Effective Prompts for Better Results

1. Goal: use one action verb and name the decision, artifact or change required.
2. Context: state the audience, business situation, time period, terminology and intended use.
3. Source: name the files, thread, meeting, table or approved web sources to use and any sources to exclude.
4. Expectations: specify structure, length, tone, units, citation needs, uncertainty labels and acceptance checks.
5. Review the response, then use a focused follow-up instead of restarting with another vague prompt.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Writing Effective Prompts for Better Results

WORKED EXAMPLE

- Goal: create a one-page launch brief for department heads.
- Context: the Asteron client portal pilot begins on 18 August and leaders need decisions, owners and risks.
- Source: use only Project_Brief and Decision_Log; do not add market facts.
- Expectations: five headings, concise professional tone, ISO dates, a source note for every decision and an Open Questions section.

DECISION GUIDE

- **Use when**

– The task has a definable output and the user can name a trustworthy evidence boundary.

– The first response is close but needs a controlled change to scope, format, tone or source coverage.

- **Avoid when**

– The user cannot explain the intended decision or determine which source should govern the answer.

– The prompt contains credentials, secrets or unnecessary sensitive personal information.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Writing Effective Prompts for Better Results

Specific

- One task, one audience and one intended use.

Grounded

- Named sources and explicit exclusions.

Verifiable

- Acceptance checks that a reviewer can apply without guessing.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · CONCEPT

Researching and Summarising with Copilot Chat

WHAT

- Copilot Chat is a conversational workspace for asking questions, researching and synthesising information. Depending on the signed-in account, licence and organisational settings, it may use web information, explicitly referenced files and broader work context. The response can include citations or source links that help the user trace statements back to evidence.

WHY IT MATTERS

- Research becomes faster when Copilot can compare several permitted sources with explicit authority labels, but synthesis can hide contradictions, missing dates or weak evidence. A source register and claim ledger keep the research auditable: every important claim is recorded with its source, confidence and unresolved question.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

How It Works — Researching and Summarising with Copilot Chat

1. Define the research question and decide whether the boundary is work sources, web sources or both.
2. Attach or reference only the permitted source pack, preserve each file's authority and status, and ask for a source-by-source inventory before synthesis.
3. Request claims in a table with source, evidence, uncertainty and follow-up needed.
4. Open the referenced material, compare quotations and numbers, and mark each claim Verified, Revise or Hold.
5. Save the approved summary and source register for the next app rather than relying on chat history alone.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Researching and Summarising with Copilot Chat

WORKED EXAMPLE

- Copilot compares the Asteron project brief, stakeholder notes and decision log.
- It correctly identifies the launch date but assigns the wrong owner because two notes use similar role titles.
- The learner opens both sources, corrects the owner and records the unresolved training-room capacity question.

DECISION GUIDE

- **Use when**
  - Several accessible sources must be summarised, compared or turned into questions for a reviewer.
  - A human can inspect the cited sources and keep a durable record of the approved findings.
- **Avoid when**
  - The answer would depend on inaccessible, outdated or unapproved evidence that cannot be checked.
  - The user plans to paste the generated text directly into a public deliverable without source review.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Researching and Summarising with Copilot Chat

Coverage

- List which sources were used, missing and excluded.

Traceability

- Link every material claim, date, number and owner to its governing source.

Uncertainty

- Preserve contradictions and open questions instead of smoothing them away.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · CONCEPT

Drafting, Rewriting and Summarising Documents in Word

WHAT

- Copilot in Word can create a draft from a prompt or referenced file, rewrite selected text, summarise a document and answer questions about its contents. Chat-only work can stay in the pane, while editing actions propose changes in the document. The user keeps control by reviewing the preview, retaining accurate wording and rejecting unsupported additions.

WHY IT MATTERS

- Word turns research into a governed business artifact. A good workflow separates the approved facts from the generated expression: the brief controls scope, the source pack controls content, the style guide controls voice and a release checklist controls whether the document is ready to hand off.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

How It Works — Drafting, Rewriting and Summarising Documents in Word

1. Start from a saved Word file and state audience, purpose, length, structure and named source files.
2. Generate a first draft, then compare every heading, date, owner, number and commitment with the source register.
3. Select only the weak passage and request a bounded rewrite that preserves meaning and defined terms.
4. Use comments or a review table to record Keep, Change or Remove decisions.
5. Save an approved version before another app uses the document as a source.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Drafting, Rewriting and Summarising Documents in Word

WORKED EXAMPLE

- The learner creates an Asteron launch brief of no more than two pages from a supported verified-claims TXT export.
- A rewrite makes the risks more concise but accidentally changes 'pilot group' to 'all customers'.
- The learner rejects that change, restores the approved scope and marks the file Approved for deck handoff.

DECISION GUIDE

- **Use when**
  - A document needs a structured first draft, a bounded tone change or a source-based summary.
  - The owner can review proposed changes and maintain version history in OneDrive or SharePoint.
- **Avoid when**
  - The source brief is unresolved or the requested rewrite could alter a binding commitment without review.
  - The document contains material the signed-in account is not authorised to process with the feature.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Drafting, Rewriting and Summarising Documents in Word

Fidelity

- Preserve approved meaning, scope, dates, owners and defined terms.

Audience

- Use the reader's decisions and questions to shape structure and tone.

Release

- Approve a named version before it becomes the source for another artifact.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · CONCEPT

Generating and Refining Presentations in PowerPoint

WHAT

- Copilot in PowerPoint can draft a presentation from a prompt or an existing Word or PDF file, create or refine slide text, add a slide grounded in a referenced file, and summarise a deck. The generated presentation remains a draft: layout, facts, sequence, visuals, accessibility and speaker notes still require expert review.

WHY IT MATTERS

- A document-to-deck workflow can preserve the approved narrative while reducing assembly time. However, a slide is not a paragraph pasted onto a canvas. Each slide needs one message, visible evidence and a role in the story; decorative images must not imply facts that the source does not support.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · PROCESS

How It Works — Generating and Refining Presentations in PowerPoint

1. Approve and save the source document in OneDrive or SharePoint before starting the presentation.
2. Ask for a bounded slide count, named audience, decision-oriented sequence and required sections.
3. Compare slide titles, claims, dates, owners and numbers with the Word source and source register.
4. Refine one slide at a time, replacing generic text and inappropriate imagery with accurate content.
5. Check reading order, alt text, contrast, speaker notes and the final call to action before sharing.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Generating and Refining Presentations in PowerPoint

WORKED EXAMPLE

- Copilot creates a six-slide Asteron launch deck from the approved Word brief.
- The generated risks slide omits the training dependency and uses a generic image unrelated to the pilot.
- The learner restores the missing risk, replaces the image with a simple milestone diagram and adds source notes.

DECISION GUIDE

- **Use when**
  - A stable source document already contains the approved narrative and the deck needs a fast first structure.
  - The presenter can edit the result, check accessibility and rehearse the final story.
- **Avoid when**
  - The source file is unapproved, contradictory or too long to support a focused presentation.
  - A generated image or slide could be mistaken for real operational evidence.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Generating and Refining Presentations in PowerPoint

Story

- One audience, one decision path and one message per slide.

Evidence

- Every factual slide traces to the approved source; visuals do not fabricate proof.

Accessibility

- Readable contrast, concise text, logical reading order and useful alternative text.

© 2026 Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Getting Started with Microsoft 365 Copilot

Lab 1

- Research the Asteron Launch and Build a Verified Source Register

Lab 2

- Draft and Approve the Asteron Launch Brief in Word

Lab 3

- Generate and Refine the Asteron Decision Deck in PowerPoint

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · HANDS-ON

Research the Asteron Launch and Build a Verified Source Register

LAB 1

You will inspect three synthetic Asteron source files, register their purpose and status, then ask Copilot Chat to synthesise the launch facts. You will open the sources, verify dates, owners, decisions and open questions, and keep unsupported statements out of the approved ledger.

You'll build

work-c027/C027-Asteron-Source-Register.xlsx with Sources, Claim_Ledger and Review_Log tables, plus work-c027/C027-Asteron-Verified-Claims.txt and a Reviewed release record

1 Inspect sources	2 Write G-C-S-E	3 Generate ledger	4 Trace claims

Tools: Microsoft 365 Copilot Chat · Excel · asteron-project-brief.md · asteron-decision-log.csv · asteron-stakeholder-notes.md

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 1 · VERIFY

Research the Asteron Launch and Build a Verified Source Register

Test it

tblSources must contain exactly three permitted sources with their true authority/status and no web source. tblClaims must include the six material checks with Source_ID and evidence. The 2026-08-13 data-export date must supersede 2026-08-12, and the support clinic must remain proposed. Every unsupported statement must be REVISE or HOLD. tblReviewLog must contain every required review field, and the TXT export must contain only VERIFIED claims, including source-supported Proposed/Open items with those labels and no unsupported HOLD rows. The final release state must be Reviewed, not Approved, because one room question remains open.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · HANDS-ON

Draft and Approve the Asteron Launch Brief in Word

LAB 2

You will create a Word document for Asteron department heads, use the supported verified-claims TXT export as the Copilot reference, then review the generated draft against the source register and project brief line by line. You will use Copilot to rewrite one selected passage without changing scope, commitments or unresolved items.

You'll build

work-c027/C027-Asteron-Launch-Brief-v1.0.docx with five required sections, source notes, an Open Questions box and an Approved for deck handoff record

1 Create brief	2 Ground draft	3 Trace facts	4 Rewrite one passage

Tools: Word for Microsoft 365 · Copilot in Word · C027-Asteron-Verified-Claims.txt · C027-Asteron-Source-Register.xlsx

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 2 · VERIFY

Draft and Approve the Asteron Launch Brief in Word

Test it

The Word file must contain exactly the five required headings and remain within two pages including the release table. Every material date, number, owner and commitment must trace to a Source_ID. The launch date must be 2026-08-18, the data export 2026-08-13 and the support-clinic room must remain open. The title block must show v1.0 and Approved for deck handoff.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 01 · HANDS-ON

Generate and Refine the Asteron Decision Deck in PowerPoint

LAB 3

You will use the approved Lab 2 Word brief to generate a PowerPoint draft for department heads. You will compare every factual slide with the source, replace generic or misleading content, refine one slide from a referenced file and complete an accessibility and release check.

You'll build

work-c027/C027-Asteron-Decision-Deck-v1.0.pptx with six decision-oriented slides, concise speaker notes, source notes and a Reviewed for internal presentation status

1 Generate from file	2 Check story	3 Trace facts	4 Refine visuals

Tools: PowerPoint for Microsoft 365 · Copilot in PowerPoint · C027-Asteron-Launch-Brief-v1.0.docx

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 3 · VERIFY

Generate and Refine the Asteron Decision Deck in PowerPoint

Test it

The deck must contain exactly six slides in the required sequence. All repeated facts must match the approved Word brief, slide 3 must show dependencies/status without numerical readiness measures, slide 4 must contain only the four approved milestones, and no visual may imply real customer evidence. Each factual slide must have a Source_ID note. The final notes must record the Accessibility Checker result, and the final state must be Reviewed for internal presentation.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC RECAP

Recap - Getting Started with Microsoft 365 Copilot

1. LO1 - Ground and Prompt: Distinguish prompt instructions from grounding sources, use Goal-Context-Source-Expectations, and trace every factual statement in a Copilot Chat summary to an approved source.

2. LO2 - Write and Present: Use Word to draft and rewrite against an audience brief, approve the document before handoff, and use that approved file as the source for a concise PowerPoint presentation.

© 2026 Tertiary Infotech Academy Pte Ltd

02

TOPIC 02

Copilot Across Your Everyday Work Apps

Excel analysis and formulas · Outlook email work · Teams recaps · end-to-end app workflows · responsible AI and data privacy

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE COVERAGE Second half · 5 connected labs

Key Concepts — Copilot Across Your Everyday Work Apps

1

Bounded Excel analysis

Name the table, columns, filters, units and expected checks before asking for a formula or insight.

2

Thread-to-response control

Separate facts extracted from an Outlook thread from the generated wording of a draft reply.

3

Transcript-backed actions

A Teams recap is useful only when owners, due dates and decisions agree with the meeting evidence.

4

Handoff contracts

Each app passes an approved artifact, source note, owner and verification status to the next app.

5

Permissions are the perimeter

Copilot honours the user's access; overshared content therefore remains an organisational risk.

6

Human release gate

Generated content stays in Draft or Hold until a named person checks evidence, sensitivity and audience.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · CONCEPT

Analysing Data and Generating Formulas in Excel

WHAT

- Copilot in Excel can help analyse table-like data, surface summaries, trends and outliers, generate or explain formulas, and create editable workbook elements such as tables, PivotTables and charts in supported experiences. Some analytical responses may be static. The user must understand the grain, data types, filters and calculation logic before relying on the output.

WHY IT MATTERS

- A plausible formula can still use the wrong denominator, sign, date boundary or blank-value rule. Excel makes generated logic inspectable, so the masterclass pairs every Copilot action with an independent control: row count, formula sample, reconciliation total and edge-case review.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · PROCESS

How It Works — Analysing Data and Generating Formulas in Excel

1. Save the workbook to an approved cloud location, keep the raw data unchanged and convert the bounded range into a named table.
2. State the row grain, business question, named columns, filters, units and required output.
3. Ask Copilot to propose or explain the formula before applying it; inspect structured references and fill behaviour.
4. Recalculate control totals using an independent method and sample normal, blank and boundary rows.
5. Label generated insights as Observed, Hypothesis or Unknown and record the checked workbook version.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Analysing Data and Generating Formulas in Excel

WORKED EXAMPLE

- Asteron needs confirmed attendance rate and follow-up priority for a 20-person pilot cohort.
- Copilot proposes a rate formula, but the learner notices blank attendance values are included in the denominator.
- The learner revises the rule, checks three edge rows and ties the summary counts to the raw table.

DECISION GUIDE

- **Use when**
  - The data is tabular, the requested calculation is explicit and the workbook can retain visible controls.
  - The user can inspect formulas, PivotTables, charts or generated analytical logic.
- **Avoid when**
  - The dataset has undefined grain, mixed meanings or unresolved quality problems.
  - A static generated visual would be mistaken for a refreshable workbook result.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Analysing Data and Generating Formulas in Excel

Boundary

- Name the table, columns, date range, filters, units and exclusions.

Logic

- Inspect formula, aggregation and missing-value rules rather than accepting the label.

Tie-out

- Reconcile counts and totals independently before interpreting patterns.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · CONCEPT

Drafting Emails and Summarising Threads in Outlook

WHAT

- Copilot in Outlook can summarise email threads, draft messages from a prompt and thread context, offer coaching on tone and clarity, and help prepare for meetings in eligible experiences. Feature availability varies by licence, client and policy. Signed, encrypted, rights-managed or some labelled messages can have additional limitations.

WHY IT MATTERS

- Email combines factual history with a consequential communication act. A safe workflow first extracts decisions, requests, owners and dates from the thread, then drafts a reply that does not invent agreement. The sender verifies recipients, attachments, sensitivity, commitments and tone before sending.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · PROCESS

How It Works — Drafting Emails and Summarising Threads in Outlook

1. Open the bounded synthetic thread and ask for decisions, action items, open questions and conflicting statements.
2. Compare the summary with each message and correct owner, date, number and status errors.
3. Draft a response with explicit audience, purpose, tone, commitments and items that must remain unresolved.
4. Use coaching to review clarity and tone without allowing a rewrite to change factual meaning.
5. Check To, Cc, attachments, links, sensitivity and every commitment; keep the message as a draft until approved.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Drafting Emails and Summarising Threads in Outlook

WORKED EXAMPLE

- The Asteron thread contains two proposed training dates but only one confirmed room booking.
- Copilot's first draft presents both dates as final. The learner restores the distinction and asks the facilities owner to confirm.
- The message remains in Draft and its facts are compared with the decision log before any send action.

DECISION GUIDE

- **Use when**

– A bounded thread needs a catch-up summary, response outline or tone review.

– The sender can inspect the complete thread and owns the final recipient and send decisions.

- **Avoid when**

– The thread includes highly sensitive content not suitable for the intended audience or unsupported client experience.

– The generated draft would create a commitment that no authorised person has approved.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Drafting Emails and Summarising Threads in Outlook

Facts

- Separate thread evidence from generated wording and preserve unresolved items.

Recipients

- Recheck To, Cc, attachments and audience before release.

Commitments

- Do not turn proposals, questions or estimates into promises.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · CONCEPT

Meeting Recaps and Action Items in Teams

WHAT

- Copilot and intelligent recap in Teams can use a meeting transcript, chat and supported event content to summarise key points, decisions and follow-up tasks. Recap features depend on the event type, licence, recording or transcription settings, language and organisational policy. A recap is generated evidence aid, not a replacement for the governing transcript or a confirmed action register.

WHY IT MATTERS

- Meeting summaries compress fast-moving conversation, but transcription errors and ambiguous speech can misassign an owner or due date. A strong action register requires an action verb, deliverable, named owner, ISO date, status and a transcript reference; unresolved statements stay open.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

How It Works — Meeting Recaps and Action Items in Teams

1. Obtain consent and follow organisational policy before recording or transcription; use the supplied synthetic transcript when live transcription is unavailable.
2. Ask for decisions, action items, blockers and open questions in separate sections.
3. Compare each item with the transcript or chat and correct speaker attribution, negation, numbers and dates.
4. Convert confirmed actions into a register with owner, deliverable, due date, evidence and status.
5. Share the reviewed register only with the intended participants and retain open questions visibly.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Meeting Recaps and Action Items in Teams

WORKED EXAMPLE

- A speaker says the FAQ draft is due Friday, but the room booking will be confirmed next Monday.
- The generated recap assigns both items to the same owner and date.
- The learner checks the transcript, corrects the two records and labels the room decision Open.

DECISION GUIDE

- **Use when**
  - A permitted transcript or meeting chat exists and the participants need a faster first recap.
  - A person who attended can validate decisions, owners and due dates before circulation.
- **Avoid when**
  - Recording or transcription is not permitted, participants have not been informed or sensitive discussion needs special handling.
  - The recap will be treated as final minutes without comparison to the meeting evidence.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Meeting Recaps and Action Items in Teams

Consent

- Follow policy and participant expectations for recording, transcription and sharing.

Evidence

- Link actions and decisions to transcript language or chat context.

Ownership

- Every confirmed action has one owner, one deliverable and one due date.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · CONCEPT

Building End-to-End Copilot Workflows Across Apps

WHAT

- An end-to-end Copilot workflow connects approved outputs across apps without losing source boundaries, ownership or review status. The key is a handoff contract: every transition names the source artifact, approved version, intended destination, required transformation, constraints, owner and verification gate.

WHY IT MATTERS

- Cross-app speed can multiply an early error. If an unverified chat summary becomes a Word brief, then a deck, email and meeting plan, one wrong date appears everywhere. Checkpointed handoffs contain the blast radius: downstream apps receive only approved artifacts and changes are reconciled back to the source register.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · PROCESS

How It Works — Building End-to-End Copilot Workflows Across Apps

1. Map the workflow from source evidence to Chat synthesis, Word brief, PowerPoint deck, Excel analysis, Outlook draft and Teams actions.
2. Define a release state for each artifact: Draft, Reviewed, Approved or Hold.
3. At each handoff, name the file and version, destination, allowed transformation and facts that must not change.
4. Run a consistency check for titles, dates, numbers, owners, terminology and audience across every artifact.
5. Record the final owner and next action; keep links rather than duplicating uncontrolled copies where possible.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Building End-to-End Copilot Workflows Across Apps

WORKED EXAMPLE

- The approved Asteron Word brief supplies the story for PowerPoint, while Excel supplies verified attendance figures.
- The Outlook draft and Teams action register use links to those artifacts and repeat only the minimum confirmed facts.
- A cross-app check detects that one slide uses an earlier launch date; the learner corrects it before the pack is released.

DECISION GUIDE

- **Use when**
  - Several apps contribute distinct strengths and each handoff can be checkpointed.
  - A named owner can reconcile downstream outputs to the governing sources.
- **Avoid when**
  - The workflow copies unapproved chat text from app to app or obscures which file is authoritative.
  - Automation would send, publish or schedule consequential output without a human release gate.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Building End-to-End Copilot Workflows Across Apps

Authority

- Declare which artifact governs each fact, number and commitment.

State

- Show Draft, Reviewed, Approved or Hold at every handoff.

Consistency

- Reconcile titles, dates, owners, measures and audience across the full pack.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · CONCEPT

Responsible AI, Data Privacy and Best Practices

WHAT

- Responsible use of Microsoft 365 Copilot combines technical protections with human judgment. For organisational use, enterprise data protection applies to prompts and responses, Microsoft 365 permissions continue to govern accessible work data, and interactions can be retained for audit and compliance. These protections do not correct oversharing, weak sources or inaccurate generated content.

WHY IT MATTERS

- Copilot can accelerate existing good practice and expose existing information-governance weaknesses. A user who can access an overshared file may receive it in grounded results. Responsible practice therefore uses least privilege, sensitivity and sharing controls, minimal necessary data, source verification, transparent AI use where appropriate and named human accountability.

HUMAN CHECK

- Ground the task in approved facts.
- Review evidence, privacy, rights and tone.
- Approve, edit or stop before use.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · PROCESS

How It Works — Responsible AI, Data Privacy and Best Practices

1. Confirm identity, licence, organisational policy, approved app and the minimum data necessary for the task.
2. Check file permissions, sharing links, labels and audience before referencing or publishing content.
3. Do not place credentials, secrets or unnecessary sensitive personal information in prompts.
4. Review outputs for factual error, harmful bias, privacy exposure, unsupported inference and inappropriate tone.
5. Record sources, meaningful AI assistance, reviewer, release decision and unresolved limitations.

© 2026 Tertiary Infotech Academy Pte Ltd

In Practice — Responsible AI, Data Privacy and Best Practices

WORKED EXAMPLE

- A Copilot search surfaces an old broadly shared roster with personal contact details.
- The learner does not use or reproduce the roster, reports the oversharing through the organisation's process and uses the synthetic cohort file instead.
- The final pack records its sources, reviewer and Approved state without exposing unnecessary personal information.

DECISION GUIDE

- **Use when**
  - The task uses authorised data, proportionate controls and a reviewer who understands the decision context.
  - The organisation's retention, sensitivity, sharing and acceptable-use requirements are known.
- **Avoid when**
  - The prompt would expose secrets, bypass access controls, profile people unfairly or conceal an unsupported decision.
  - The user cannot identify who is accountable for checking and releasing the output.

© 2026 Tertiary Infotech Academy Pte Ltd

Quality Lens — Responsible AI, Data Privacy and Best Practices

Minimise

- Use only the data and detail necessary for the declared purpose.

Protect

- Apply permissions, labels, sharing and retention controls appropriate to the source.

Account

- Name the reviewer, sources, limitations and release decision.

© 2026 Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Copilot Across Your Everyday Work Apps

Labs 4–5

- Analyse Pilot Readiness and Verify Copilot Formulas in Excel
- Summarise the Launch Thread and Prepare a Reviewed Outlook Draft

Labs 6–7

- Validate a Teams Recap and Create the Action Register
- Assemble and Reconcile the Cross-App Coordination Pack

Lab 8

- Run the Responsible-Use and Privacy Release Gate

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · HANDS-ON

Analyse Pilot Readiness and Verify Copilot Formulas in Excel

LAB 4

You will import a 20-row synthetic pilot cohort, preserve the raw source and ask Copilot to create a priority formula and readiness summary. You will inspect the logic, correct denominator rules and reconcile counts, rates and averages before writing three decision-relevant observations.

You'll build

work-c027/C027-Asteron-Pilot-Readiness.xlsx with Raw_Cohort, Analysis, Control and Prompt_Log sheets, a verified priority column and an Approved internal readiness summary, plus work-c027/C027-Asteron-Verified-Readiness-Summary.txt

1 Protect source	2 Define measures	3 Generate formulas	4 Tie out controls

Tools: Excel for Microsoft 365 · Copilot in Excel · asteron-pilot-readiness.csv

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 4 · VERIFY

Analyse Pilot Readiness and Verify Copilot Formulas in Excel

Test it

Raw_Cohort must match the CSV and tblReadiness must contain 20 rows with 20 unique IDs. Control values must match asteron-excel-controls.md exactly. Priority must show High only for P004, P008, P010 and P015 among confirmed participants, and Not in cohort for P017-P020. Every department row and the grand total must tie to asteron-department-controls.csv, every summary sentence must cite a control cell, and the verified TXT export must contain the three headline measures.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · HANDS-ON

Summarise the Launch Thread and Prepare a Reviewed Outlook Draft

LAB 5

You will create a private synthetic email thread in your own mailbox from the supplied messages, use Copilot to summarise decisions and open questions, then draft a concise internal update. You will verify the thread facts and leave the message unsent for the cross-app review.

You'll build

An Outlook draft titled [DRAFT] Asteron pilot launch update - review required, plus work-c027/C027-Outlook-Thread-Review.md with the verified facts and release checklist

1 Create thread	2 Summarise facts	3 Compare messages	4 Draft response

Tools: Outlook for Microsoft 365 · Copilot in Outlook · asteron-email-thread.md

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 5 · VERIFY

Summarise the Launch Thread and Prepare a Reviewed Outlook Draft

Test it

The mailbox must contain a three-message synthetic self-thread and one unsent draft. The review file must exist in work-c027, state that embedded synthetic sender/date labels govern project history, show 2026-08-13 as the current export date, keep the support clinic proposed and hold external announcement until privacy sign-off. The final draft must be under 180 words, addressed only to self, contain no attachment and remain HOLD - cross-app review pending.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · HANDS-ON

Validate a Teams Recap and Create the Action Register

LAB 6

You will use a trainer-provided synthetic Teams meeting recap or the supplied transcript in Copilot Chat inside Teams. You will compare generated decisions and actions with the evidence, correct attribution and dates, and create a durable action register for the cross-app workflow.

You'll build

work-c027/C027-Teams-Action-Register.xlsx with Decisions, Actions, Proposals and Open_Questions sheets, transcript references and a Reviewed internal coordination state, plus work-c027/C027-Asteron-Verified-Actions.txt

1 Open recap	2 Extract categories	3 Trace evidence	4 Correct actions

Tools: Microsoft Teams · Copilot or intelligent recap · asteron-teams-transcript.md · Excel

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 6 · VERIFY

Validate a Teams Recap and Create the Action Register

Test it

The register must contain all four required sheets/tables, the five required work items with exact owners and dates, plus one proposed clinic and one open room question. Every confirmed action must include transcript evidence, and the file must record whether the source was a Teams recap or the supplied transcript fallback. The release state must be Reviewed for internal coordination, and the verified-actions TXT export must contain only confirmed actions.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · HANDS-ON

Assemble and Reconcile the Cross-App Coordination Pack

LAB 7

You will register the Chat, Word, PowerPoint, Excel, Outlook and Teams outputs, declare which artifact governs each type of information, then use Copilot to draft a coordination update. A consistency matrix will expose any date, owner, number or status that drifted during an app handoff.

You'll build

work-c027/C027-Asteron-Cross-App-Manifest.xlsx and C027-Asteron-Coordination-Pack.docx with authoritative-source links, a consistency matrix and an Approved internal handoff state

1 Register artifacts	2 Declare authority	3 Draft pack	4 Reconcile facts

Tools: Microsoft 365 Copilot Chat · Word · Excel · PowerPoint · Outlook · Teams

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 7 · VERIFY

Assemble and Reconcile the Cross-App Coordination Pack

Test it

The manifest must contain six artifact rows with links, owners, versions and states. The authority map must name one governing artifact for each information type. Every required consistency row must show MATCH across all artifacts where the fact appears. The coordination pack must be no more than two pages, cite its source artifacts and be Approved internal handoff; the Outlook draft must remain Hold. Any substituted prior output must be visibly marked REJOIN-PACK-v1.0 and Trainer-validated practice fallback.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 02 · HANDS-ON

Run the Responsible-Use and Privacy Release Gate

LAB 8

You will inspect a simulated sharing and sensitivity scenario for every Asteron artifact, identify an overbroad readiness-data link, minimise copied personal detail and complete the C027 release gate. The default path is a tabletop review; an actual permission change is permitted only in a trainer-authorised sandbox. The exercise ends with simulation-only, Revise or Hold decisions and named owners.

You'll build

work-c027/C027-Asteron-Responsible-Use-Release-Log.docx with artifact-level permission, data, accuracy, audience, transparency, reviewer and release decisions

1 Inspect permissions	2 Minimise data	3 Review risks	4 Remediate gaps

Tools: Microsoft 365 · OneDrive or SharePoint sharing controls · Copilot · asteron-sharing-simulation.md

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 8 · VERIFY

Run the Responsible-Use and Privacy Release Gate

Test it

The release log must contain seven artifact rows and no blank reviewer or decision. It must identify the overbroad readiness link, exclude the unnecessary contact list, record the group-verification request or trainer-authorised sandbox evidence, keep the Outlook message unsent and hold the external announcement pending privacy sign-off. The coordination pack may be Approved in simulation only on the tabletop path or Approved for controlled sandbox use only on an authorised sandbox path after the required evidence is recorded. Real organisational release must remain unapproved, and the log must include a meaningful-AI-assistance note.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC RECAP

Recap - Copilot Across Your Everyday Work Apps

1. LO3 - Analyse and Communicate: Bound Excel analysis to named data, inspect formulas and reconcile totals; in Outlook, separate thread facts from generated wording and keep the final send decision with the user.

2. LO4 - Coordinate and Govern: Validate Teams actions against the transcript, preserve ownership and due dates across app handoffs, and use permissions, sensitivity, source checks and human approval as release gates.

© 2026 Tertiary Infotech Academy Pte Ltd

WRAP-UP

Course Summary & Next Steps

© 2026 Tertiary Infotech Academy Pte Ltd

LEARNING OUTCOMES

What You Achieved

1

Ground & Prompt

Explain how Microsoft 365 Copilot grounds responses, apply a structured prompt method and verify a source-backed research summary in Copilot Chat.

2

Write & Present

Draft, rewrite and validate a business document in Word, then generate and refine a presentation in PowerPoint from the approved document.

3

Analyse & Communicate

Analyse a bounded dataset and generate formulas in Excel, then summarise a synthetic email thread and prepare a reviewed response in Outlook.

4

Coordinate & Govern

Produce a Teams meeting recap and action register, connect outputs across Microsoft 365 apps, and apply responsible-use, privacy and human-review controls.

© 2026 Tertiary Infotech Academy Pte Ltd

NEXT STEPS

Continue the Traceable Workflow

1. Reuse the G-C-S-E prompt card on one bounded, authorised task.
2. Keep source, proposal, verification and release state together.
3. Reconcile repeated dates, owners and numbers across every app handoff.
4. Review current Microsoft guidance whenever features or labels change.

© 2026 Tertiary Infotech Academy Pte Ltd

WRAP-UP

Keep Practising After the Course

1. Re-run the labs on your own machine — repetition is what makes the skills stick.
2. Apply the techniques to a real process or project in your own organisation.
3. Keep your downloaded C027 course files and use the lab checkpoints to restart safely.
4. Explore the follow-on courses at www.tertiarycourses.com.sg.
